                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human protein C (AAW02600) is a zymogen of a serine protease that plays an important role in the regulation of blood coagulation and the generation of fibrinolytic activity in vivo. It is synthesised in the liver and processed to a 2-chain molecule, which is itself converted to activated protein C. Protein C and activated protein C are useful in the treatment of thrombotic disorders. They can be produced e.g. in mammalian host cells using a cDNA clone (AAT32795) derived from Hep G2 cells. Variant protein C, modified to improve cleavage between the heavy and light chains of the circulating intermediate, can also be produced. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 1996-251006/25.

                                                                                                                    庆
                                                                                                                                                                                                                                            The sequence was deduced from a clone isolated from a cDNA library prepd. CC from mRNA from Hep G2 cells. It is a protein C precursor, including light CC and heavy chains, which is clasved to produce activated protein C (see CC feature table). The DNA encoding the sequence can be manipulated by contivated a comprising techniques to express a protein comprising (when activated) a heavy chain and a truncated light chain comprising residues CC 1-149, 1-150, 1-151 or 1-152 of the natural sequence. The protein pref. CC comprises the precursor of formula: Pre-pro-L-X-H Pre-pro = pre-pro peptide of protein C with all/part replaced by the corresponding peptide of either protein S, factors VI, IX or X, or prothrombin; L = AAs 1-149, CC 150, 151 or 152 of light chain; X = 3-10 Lys/arg residues; and H = heavy CC chain. Cells transformed with expression vectors contg. the modified DNA CC sequences produce the new proteins which can be used to regulate anticoagulant and fibrinolytic systems. See also W09112320 (AARI3074). CC (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              402
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
```

A human protein C or an activated protein C has a H chain contg. one of the residues 239-246 (= residues 450-457 in the sequence below) in the H chain of natural activated protein C as the C-terminal, or has a L chain contg. one of the residues 141-155 (= residues 141-155 in the sequence below), pref. residues 149-155 (= residues 149-155 in the sequence below), the L chain of natural activated protein C as the C-terminal. The

human protein

റ

or the

activated protein

C can be used as an anticlotting

Human protein C and activated protein C with short H chains - useful anti-clotting agents and fibrinolysis promoters.

This sequence, or a fragment of it, is used in the construction of hybrid phospholipid-binding proteins (PBP) having the same biological activity as human protein C or human activated protein C. The hybrid sequence would comprise at least one lipocortin phospholipid binding domain (PBD), e.g. of PAP-1, joined to a gla-domainless protein C or activated protein C. See AAQ12680-81 for such examples. See also AAQ12678-81. (Updated on

It comprises the following regions: residues 1-42 are the constant peptide and propeptide of human protein C; mimortant for directing secretion and gamma-carboxylation of protein C; mimortant for directing cost-translationally modified, constitute the light chain of both the cwo-chain zymogen and activated forms of protein C; residues 19-9 are comprising a first cleavage (either between cresidues 19-7 or 19-200), followed by carboxypeptidase or comprising a first cleavage (either between cresidues 19-7 or 19-200), followed by carboxypeptidase or constitute the activated protein C; residues 200-211 constitute the activated protein C; residues 21-461, once post-cranslationally modified, constitute the activated heavy chain of active conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Conce post-translationally-modified, is composed of residues 20-461.

Constitute the activated protein C are regulators of haemostasis, composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

Constitute the composed of residues 20-461.

                                                                                                                                                                                                                                                                           The amino acid sequence codes for human protein C (HPC). The activated protein can comprise one of 3 different truncated light chains, Ala(1) to Lys(150), Lys(151) or Arg(152). The activated HPC with a truncated light chain is more stable during storage. It can be administered for prophylactic and/or therapeutic treatments of disease states or injuries to enhance the patient's own anti- coagulative or fibrinolytic capabilities. See also W09109951 (AARI3074). (Updated on 25-WAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HPC.

Recombinantly produced protein C can be used to treat thrombotic disorders such as venous thrombosis as it has anti-coagulant properties. The protein sequence is thought to yield two peptide chains; the first contains the Gla domain and growth factor domains and the second (the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human protein \mathbb C or activated protein \mathbb C - prepd. using expression vector capable of integration in mammalian host cell DNA.

This artificial sequence is of a formula given in the specification, and comprises a peptide from fibrinopeptide A, and a thrombin-cleavage site, other than that of the alpha-chain of fibrinogen. The chimeric protein and serine protease derivatives obtained by cleaving the chimeric protein with thrombin, are useful as antithrombotic, antiinflammatory, antiapoptotic

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

# Claim 2; Page 79-81; 92pp; English

cc attachment group for the non-polypeptide group (e.g. an N-glycosylation occ site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 5% of its side group exposed to the surface, with the provise that the cc substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln.

Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VI) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and cdiagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow crashitatory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 correased resistance reduced immunogenicity and/or increased beavailability. The conjugate offers a number of advantages over the currently available configurate offers a number of advantages over the currently available. The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents zymogen protein C upon which the variants of the invention were based

ABR55547 standard; protein; 419

ABR55547;

11-AUG-2003 (first entry)

Amino acid sequence of mature human protein C (PC).

Protein C, coagulation, thrombin; fibrinopeptide A, serine protease; antithrombotic; antiinflammatory; antiapoptotic; profibrinolytic; hypercoagulative disease; thrombosis; myocardial infarction; pulmonary embolism; reocclusion; angioplasty; thrombomodulin.

Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          increased resistance to inactivation by serpins when compared to wild-
type activated human protein C. They also have longer half-lives in human
blood and hence require either less frequent administration and/or
smaller dosage than wild type human protein C for treating disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and increase sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a medicament for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or in vascular grafts in combination with a thrombolytic agent. Nucleic molecules of the invention are useful for treating humans with genetically predisposed prothrombotic disorders by gene therapy. The present sequence is human mature wild type protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI:

Sequence 419 AA;
            coronary, cerebral or peripheral arteries or in vascular grafts. Human patients with genetically predisposed prothrombotic disorders may be treated by gene therapy (all claimed)
                                                                                                                                                                                                                   resistance to inactivation by serpins compared with wild-type human protein C but retain the biological activity of the wild-type protein.
                                                                                                                                                                                                                                        The present sequence is that of human protein C mature polypeptide. The invention relates to human protein C derivatives having at least 2 amino acid substitutions, and to recombinant DNA molecules encoding such derivatives. These derivatives have increased anticoagulant activity and
                                                                                                                                                                                                                                                                                                                    Novel human protein C derivative for treating, e.g., myocardial infarction, unstable angina, sepsis, thrombotic disorders, acute arterial thrombotic occlusion, and thromboembolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disulfide-bond

 The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders, hypercoagulable states such as sepsis, disseminated intravascular coagulation, purpura fulminans, major trauma, major surgery, burns, adult respiratory distress syndrome, transplantation, deep vein thrombosis, heparin-induced thromboytopenia, sickle cell disease, thalassemia, viral hemorrhagic fever, thrombotic thromboytopenic purpura, and hemolytic uremic syndrome, and also useful for treating thrombotic disorders and uremic syndrome, and also useful for treating thrombotic disorders and
